

Carbon Reduction Plan

Supplier name: West Country Milk

Publication date: 31st March 2024

Commitment to achieving Net Zero

West Country Milk is committed to achieving Net Zero emissions by 2035.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Additional Details relating to the Baseline Emissions calculations:

Baseline emissions based on Scope 1 and 2 only

Baseline year emissions: 2021

EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	4,959
Scope 2	15,109
Scope 3 (Included Sources)	Areas still under review: Business Travel Upstream transportation and distribution (suppliers) Downstream transportation and distribution (customers) Commuting Waste generated in operations
Total Emissions	20,068

Current Emissions Reporting

Reporting Year: 2023	
EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	3,427
Scope 2	10,421
Scope 3 (Included Sources)	Areas still under review: Business Travel Upstream transportation and distribution (suppliers) Downstream transportation and distribution (customers) Commuting Waste generated in operations
Total Emissions	13,848

Emissions reduction targets

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets.

We project that carbon emissions will decrease over the next eleven years to 0 tCO₂e by 2035. This is a reduction of 10% year on year (approx.)

Progress against these targets can be seen in the graph below:

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects have been completed or implemented since the 2021 baseline. The carbon emission reduction achieved by these schemes equate to 6,219 tCO₂e, a 31% reduction against the 2021 baseline and the measures will be in effect when performing the contract

Hybrid car company cars have been introduced and solar panels have been installed on office roof. The benefit of solar panels has not yet been calculated in our workings.

In the future we hope to investigate the viability of further measures such as:

- Moving to a renewable energy supplier
- Update lighting to low energy bulbs
- Mains gas as a source of heating vs heat pumps
- Relocation to a more energy efficient building

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting².

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard³.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:
